### Anadarko signs up for 60 percent of Wyo-ND Pipeline

By Staff

**May 15, 2008 --**

OMAHA, Neb. - The company proposing to build a new interstate pipeline from Wyoming to North Dakota has signed an agreement establishing Anadarko Energy Services Co. as the Bison pipeline's foundation shipper.

Anadarko's commitment is for 250 million cubic feet of natural gas per day (MMcf/d) - roughly 60 percent of the proposed pipeline's capacity -- with a term of 10 years.

The agreement is subject to the approval of Anadarko's Board of Directors.

"We have enjoyed working with Anadarko to secure its participation in the proposed Bison Project, which will provide Anadarko with a new outlet to diverse markets for its Powder River Basin supply of natural gas," said Paul F. Miller, vice president and general manager of

Northern Border.

Brian Jeffries, executive director of the Wyoming Pipeline Authority, says the authority has believed for some time that additional pipeline capacity from Wyoming was needed.

The proposed Bison Pipeline links Wyoming to the Northern Border system in North Dakota and will provide natural gas producers with access to a major downstream pipeline system with 2.4 billion cubic feet of capacity and thereby a wide range of pricing and market opportunities.

The proposed pipeline will consist of approximately 289 miles of 24-inch pipeline, compression and appurtenant facilities beginning near Dead Horse, Wyo., and the facilities of Fort Union Gas

Gathering L.L.C. and Bighorn Gas Gathering L.L.C. The pipeline will extend in a northeasterly direction to its terminus in Morton County, N.D.

It is anticipated that the initial capacity of Bison will be approximately 400 MMcf/d with a maximum capacity of 660 MMcf/d. The projected in-service date for Bison is Nov. 15, 2010.
