Sunrise Engineering has completed an extensive water study in Star Valley for the Wyoming Water Development Commission.

The study was funded by the WWDC and looked at the feasibility of creating a regional system or systems to meet the water needs in Star Valley.

The idea of moving forward with a regional study came about over three years ago. The study took two and a half year to complete.

According to Robert Hood of Sunrise Engineering, 19 of the 21 water systems that currently exist in Star Valley participated in the study.

Each system was evaluated individually. Then the study looked at ways to connect each water system with the surrounding systems to create a regional water system
