

NOTICE

The _____ will be *SMOKE TESTING* its sanitary sewer lines on _____.

The “smoke” used during this process is a special “*NON-TOXIC*” material and posing no health threat for most individuals. It may, however, be a problem for individuals with respiratory conditions.

If your home or business is problem free, you will not experience any smoke. You could receive smoke if there are any faulty or blocked ventilation pipes. You may also receive smoke in the event that bathtub, sink, or floor drains in your home or business are dry.

If you receive smoke in your home or business, check to see where it is coming from. Opening doors and windows will allow the smoke to dissipate quickly. If any smoke enters a home or business, we need to know immediately.

Testing will be done a couple blocks at a time, so it is impossible to let home and business owners know the exact time for your area.

If you see a stranger in your locality, do not be alarmed, as wastewater operators from other towns will be helping with this project.

Signed: _____
Director of Public Works
